

Acrylic Fabrication

What is Acrylic Fabrication

The acrylic fabrication process includes all processes for creating the structures and shapes from raw acrylic plastic, resulting in the end product. The process begins with sheets of acrylic plastic cut using acrylic-specific blades like saber saws, routers, table saws, and plastic cutters.

Acrylic Plastic Fabrication Applications

Items created through acrylic plastic fabrication that are used in countless everyday applications, such as:

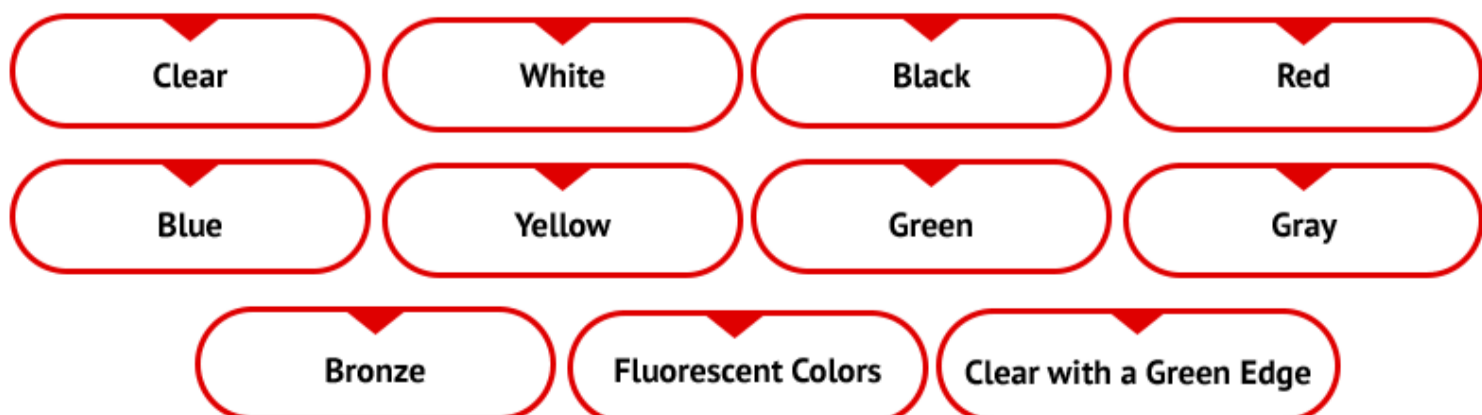

There has also been significantly increased demand for acrylic barriers because of their use as COVID-19 protection for public-facing essential workers. Acrylic barriers can be cut and shaped to virtually any client specification.

Acrylic Fabrication Capabilities

National Plastics and Seals provides custom, built-to-order fabricated acrylic products serving a wide range of industries including:

We provide these standard acrylic colors, but can also do custom colors upon request:

National Plastics and Seals Acrylic Fabrication

As a leader in the acrylic fabrication industry, we use advanced technology and a wide variety of materials, colors, and cutting technologies. To see how our acrylic fabrication capabilities can benefit your project, please [contact us](#) or [submit a request](#) for information today.
